## ENVIRONMENTAL POLICY (ISO 14001)

We use the environmental management system according to the standard ČSN EN ISO 14001. The goal is to protect the environment in the company and its surroundings as well as with the clients. We have, therefore, adopted this unified vision:

**VINOLOK is a guarantee of quality and safely sealed beverage with a design, unique and exclusive closure, the production and use of which emphasizes the protection of the environment.**

We fulfil this basic vision by focusing on the following principles:

### 1) Responsible attitude towards the environment

- a) In relation to our production, we only introduce technologies with the least environmental impact. We assess the impact of new technologies before deciding to implement them.
- b) We only introduce in the market and for further processing those products, with respect to which the environmentally friendly use is solved - during storage, use and disposal.
- c) We are constantly looking for possibilities to reduce the consumption of energy and input materials. We manage the amount of hazardous substances and deal with the amount and types of waste.
- d) By the consistent prevention of risks and pollution we prevent the possibility of emergencies, the consequences of which could have a negative impact on the environment.

### 2) Communication of environmental issues

- a) We communicate the environmental policy to all employees and forward it to other stakeholders in a suitable form. We lead and motivate employees to behave responsibly towards the environment in order to fully understand, support, and promote this environmental policy.
- b) We require the contractors to respect our environmental policy. This is what we expect from suppliers, and we advocate that they follow the same or similar rules.

In Jablonec nad Nisou, on 2 January 2020

Ing. Aleš Urbánek, CEO
